About

I help businesses build and grow their products and services by making design decisions that are strategic and have an impact, meet business needs, and are easy for end users to use.

Design Methodology

I make use of top global well-proven design patterns in my approach in order to design highly effective digital products that achieve targeted business goals and offer an exceptional UX journey to users.

Research → Interview → Analysis → Conceptualization → Designing and Prototyping → Handoff and Support.

Recent Experiences

Product Designer

Arageek - Remote
March 2022 - Present

Helped with creating a universal design system for the platform's website and app.

Product Designer

Bloom.pm - Remote
February 2021 - August 2021

I joined the product design team to help build a dashboard for internal project managers to coordinate training programs.

UX/UI Designer

Milestone Apps - Mansoura
January 2020 – December 2020

Helped establish the design team and process. I helped write products analysis, design structure, and led client discussions.

Technical Skills

Design Systems

Product evolution over time for long-term high performance.

Creative Problem Solving

Offering valuable solutions to difficult issues in the user experience.

Data Analysis

Summarizing available information into the most useful insights for the project.

Presentations

Visual communication to explain creative ideas that can be useful for the project.

Interactive Design

Linking the transition between various pages and clarifying the various states of elements on each page.
